Office Action Summary

Application No.

10/668,186

Applicant(s)

TAKAFUJI ET AL.

Examiner

Laura M. Schillinger

Art Unit

2813

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 April 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-57 is/are pending in the application.
- 4a) Of the above claim(s) 1-15 and 39-57 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 16-21, 23-27, 29-36 and 38 is/are rejected.
- 7) ☒ Claim(s) 22, 28 and 37 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Election/Restrictions

Newly submitted claim 57 is directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: claim 57 recites that the bond is a siloxane bond; such a bond is associated with the hydroxyl group which pertains to a species non-elected by the Applicant. Consequently, claim 57 is withdrawn.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim 57 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Objections

Claims 22, 28 and 37 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-21, 23,27, 29-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Spitzer et al (WO/93/15589).

Spitzer teaches the following claimed limitations as cited below:

16. A semiconductor device, comprising:

a non-single-crystal silicon thin-film device manufactured from a non-single-crystal silicon thin film and a single-crystal silicon thin-film device manufactured from a single-crystal silicon thin film, wherein the non-single-crystal silicon thin-film device and the single-crystal silicon thin-film device are provided in different areas of an insulating substrate (Fig.25 A and Page 52, lines: 1-30).

17. The semiconductor device as defined in claim 16, wherein, the single-crystal silicon thin-film device is bonded with the insulating substrate via an intervening inorganic insulating film (Fig.25B (721) and Page 52, lines: 1-30).

18. The semiconductor device as defined in claim 16, wherein, each of the non-single-crystal silicon thin-film device and the single-crystal silicon thin-film device either a MOS thin-film transistor or a MIS thin-film transistor (page 6, lines: 1-5).

Art Unit: 2813

19. The semiconductor device as defined in claim 18, wherein, in the MOS thin-film transistor, a gate, a gate insulating film, and silicon are formed on the insulating substrate in this order (page 28, lines: 1-5).

20. The semiconductor device as defined in claim 18, wherein, a thickness of a silicon thin film of the MOS thin-film transistor is about not more than 600 nm (page 28, lines: 1-5).

21. The semiconductor device as defined in claim 18, wherein, a thickness of a single-crystal silicon thin film of the MOS thin-film transistor is about not more than 100 nm (page 28, lines: 1-5).

23. The semiconductor device as defined in claim wherein, the non-single-crystal silicon thin-film device is either a MOS non-single-crystal silicon thin-film transistor or a MIS non-single-crystal silicon thin-film transistor, and the single-crystal silicon thin-film device is a bipolar single-crystal silicon thin-film transistor (page 52, lines: 1-20).

24. The semiconductor device as defined in claim 17, wherein, the non-single-crystal silicon thin-film device is either a MOS non-single-crystal silicon thin-film transistor or a MIS non-single-crystal silicon thin-film transistor, and the single-crystal silicon thin-film device includes at least either one of a MOS single-crystal silicon thin-film transistor and a bipolar single-crystal silicon thin-film transistor (page 52, lines: 1-20).

Art Unit: 2813

25. The semiconductor device as defined in claim 17, wherein, the non-single-crystal silicon thin-film device is either a MOS non-single-crystal silicon thin-film transistor or a MIS non-single-crystal silicon thin-film transistor, and the single-crystal silicon thin-film device includes a MOS single-crystal silicon thin-film transistor, and an image sensor including a Schottky or PN-junction diode or a CCD image sensor (page 52, lines: 1-20).

26. The semiconductor device as defined in claim 24, wherein, a thickness of a single-crystal silicon thin-film of the MOS single-crystal silicon thin-film transistor is thinner than a thickness of a single-crystal silicon thin film of the bipolar single-crystal silicon thin-film transistor (page 28, lines: 1-5 and page 18, line: 25).

27. The semiconductor device as defined in claim 23, wherein, the bipolar single-crystal silicon thin-film transistor has such a structure that a base area, a collector area, and an emitter area are formed and provided in one plane (Fig.25B and page 52, lines: 1-20).

29. The semiconductor device as defined in claim 23, wherein, a thickness of the single-crystal silicon thin film of the bipolar single-crystal silicon thin-film transistor is about not more than 800 nm (page 28, lines: 1-5).

30. The semiconductor device as defined in claim 16, wherein, the non-single-crystal polycrystalline-silicon thin film or a continuous grain silicon thin film, and a MOS thin-film transistor manufactured from the non-single-crystal silicon thin film includes a non-single-crystal

Art Unit: 2813

silicon, a gate insulating film, and a gate on the insulating substrate in this order (pages 18, lines:1-20).

31. The semiconductor device as defined in claim 16, wherein, the non-single-crystal silicon thin film is either one of a polycrystalline silicon thin film or a continuous grain silicon thin film, and a MOS thin-film transistor manufactured from the non-single-crystal silicon thin film includes a gate, a gate insulating film, and a non-single-crystal silicon on the insulating substrate in this order (pages 18, lines:1-20).

32. The semiconductor device as defined in claim 16, wherein, the non-single-crystal silicon thin film is an amorphous silicon thin film, and a MOS thin-film transistor or a MIS thin-film transistor, which is manufactured from the non-single-crystal silicon thin film, includes a gate, a gate insulating film, and a non-single-crystal silicon on the insulating substrate in this order (pages 18, lines:1-20).

33. The semiconductor device as defined in claim 16, silicon thin film is either a wherein, the non-single-crystal silicon thin film is an amorphous silicon thin film, and a MOS thin-film transistor or a MIS thin-film transistor, which is manufactured from the non-single-crystal silicon

Art Unit: 2813

thin film, includes a non-single-crystal silicon, a gate insulating film, and a gate on the insulating substrate in this order (pages 18, lines:1-20).

34. The semiconductor device as defined in claim 16, wherein, a difference of linear expansion between a single-crystal silicon constituting the single-crystal silicon thin-film device and the insulating substrate is about not more than 25Oppm, within a temperature range from a substantially room temperature to 600 (inherent property of the materials disclosed for a silicon single crystal layer and the insulated substrate).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 35-36 rejected under 35 U.S.C. 103(a) as being unpatentable over Spitzer et al (WO 93/15589 as applied to claim 16 above, and further in view of Okabe et al ('099).

Spitzer teaches to implement a glass substrate and a SiO₂ film is formed at least in an area on a surface of the insulating substrate (page 52, lines: 1-10), where the single-crystal silicon thin-film device is to be formed.; however fails to specify as recited by claims 35 and 36 wherein, the

Art Unit: 2813

insulating substrate is a high strain point glass including an alkaline-earth alumino-borosilicate glass.

However, Okabe teaches a glass substrate of BPSG (Col.16, lines: 1-5).

Moreover, with respect to claim 38, Spitzer fails to specify wherein, an aligning mark formed on the single-crystal silicon is detected using visible light or light whose wavelength is shorter than the visible light, through a transparent substrate, and has a form which allows the aligning mark to be aligned with an aligning mark formed on the transparent substrate.

However Okabe teaches wherein, an aligning mark formed on the single-crystal silicon is detected using visible light or light whose wavelength is shorter than the visible light, through a transparent substrate, and has a form which allows the aligning mark to be aligned with an aligning mark formed on the transparent substrate (Col.6, lines: 45-60).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Spitzer's teachings to further include a alkaline-earth alumino-borosilicate glass substrate and an alignment mark formed and detected through visible light as taught by Okabe because as Okabe teaches, such materials/methods are useful in MOS and BJT applications (Col.6, lines: 65-68).

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: In reference to claim 22, prior art fails to teach nor suggest the combination of the limitations of claim 18 and a metal pattern of the MOS single-crystal silicon thin-film transistor is formed under a wiring rule which is more relaxed than a wiring rule of a gate pattern of the MOS single-crystal silicon thin-film transistor.

In reference to claim 28, prior art fails to teach nor suggest the combination of the limitations of claim 23, wherein, a metal wiring and a contact pattern of the bipolar single-crystal silicon thin-film transistor include respective parts each being formed in accordance with a wiring rule which is more relaxed than a wiring rule of a base pattern of the bipolar single-crystal silicon thin-film transistor.

In reference to claim 37, prior art fails to teach nor suggest the combination of the limitations of claim 16, wherein, a margin of alignment of at least a part of a pattern on the single-crystal silicon is fine so as to be smaller than a margin of alignment of patterns on any one of an entire surface of a mother board, a display area, and an entirety of the non-single-crystal silicon thin-film device and the single-crystal silicon thin-film device.

Response to Arguments

Applicant's arguments filed 4/11/05 have been fully considered but they are not persuasive. Applicant argues that all the circuits formed in the thin film are essentially single

Art Unit: 2813

crystal devices and therefore Spitzer fails to teach “wherein a non-single crystal silicon thin film device and the single crystal silicon thin film are provided in different areas of an insulating substrate” as claimed. This argument is not persuasive because Spitzer explicitly teaches that the device may be amorphous, single crystal or polycrystalline films and Applicant’s conclusion that essentially all devices are single crystal devices is not supported by Spitzer’s teachings.

Therefore, as shown in Fig. 25, the single crystal; and non-single crystal devices are provided in different areas as claimed.

Applicant argues that claim 17 is not anticipated because the adhesive layer and the insulating layer are one in the same. However, such an argument is not persuasive because 712 is the insulating substrate and 721 is the adhesive layer as taught by Spitzer.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

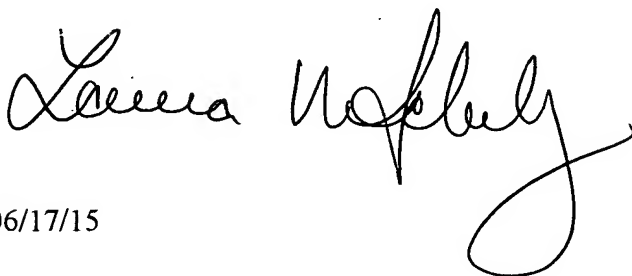

Art Unit: 2813

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura M. Schillinger whose telephone number is (571) 272-1697. The examiner can normally be reached on M-T, R-F 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W. Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
